- ▶ Universal search (VOD, PVR, Caller ID, system messages, and more)

Minerva® iTVManager is a complete software platform for the management and delivery of television services over xDSL and fiber-to-the-home networks.

The administration component of iTVManager provides a comprehensive set of tools to enable and provision subscribers, manage content acquisition, generate electronic program guides, create and price service packages, generate billing records, generate usage reports, and more.

The client component of iTVManager delivers superior response on cost-effective set-top boxes. With iTVManager, subscribers have access to a variety of video services including live television, electronic program guide (EPG), video-on-demand (VOD), subscription video-on-demand (SVOD), pay-per-view (PPV), caller ID, personal video recorder (PVR), and more.

The complete back office administration tools and the fast and easy-to-navigate client enable operators to deploy compelling and profitable services.
