The HP OpenView portfolio

Meet key management goals

The HP OpenView portfolio of solutions and products gives you tools to quickly adapt to shifts in your business, keep your data secure, troubleshoot problems more effectively and meet other key management goals. Through capabilities like these, HP helps you in your efforts to deliver critical data and services on time, all the time.

The HP OpenView portfolio encompasses offerings for infrastructure management, application management, IT service management (ITSM), business service management, cross-function management and industry management.

Adaptive Enterprise

The Adaptive Enterprise is HP's vision of an organization in which business and IT are synchronized to capitalize on change. The Adaptive Enterprise helps you lower IT-related costs while making IT flexible enough to deliver what you really need—simplicity, agility and value.

An Adaptive Enterprise enables you to achieve a tight coupling between business and IT so you are able to quickly and easily respond to change, helping to maximize return, mitigate risk, improve performance and increase agility.

Management for an Adaptive Enterprise

HP management solutions are at the heart of the Adaptive Enterprise. HP's approach to management integrates people, processes and technology to automate the dynamic link between business and IT. HP management solutions for the Adaptive Enterprise enable you to continually measure, assess and optimize the performance of IT in supporting the business. Operational and maintenance costs are reduced by increased staff efficiency, increased application availability and optimized service management.

HP OpenView management software is a key component of the HP management solutions for the Adaptive Enterprise. HP OpenView management software helps you take control of your IT and telecommunications resources. By giving you tools to troubleshoot problems, adapt quickly to change, and keep your data secure, HP solutions help ensure that business-critical data and services are delivered on time, all the time.

About this brochure

This brochure provides an at-a-glance look at the wide range of HP OpenView solutions and products. It will help you understand why enterprise IT organizations and network and service providers around the world build their businesses around HP OpenView management software. HP OpenView offers the market's most complete, end-to-end, multi-platform management suite.

HP OpenView management solutions

Infrastructure management solutions

Infrastructure management solutions from HP help you understand the availability and performance of your infrastructures and gain greater control over it. These offerings include solutions for network services management, Windows® management, storage management and systems management.

The HP OpenView Network Services Management solution enables you to dynamically link the network operation to your business processes. You gain the tools and insight to adapt to changing demands and realize the full potential of your network and your people, processes and technologies.

HP OpenView Windows Management solutions help you move up the IT maturity curve by taking control of your environment, defining and monitoring your services from end to end, and improving the efficiency of your IT resources through improved processes and automation.

Application management solutions

HP OpenView Application Management solutions allow your application owners to comprehensively monitor entire business-critical application environments. They help you see your applications as your customers do, understand the impact of underlying infrastructures, and quickly isolate the root cause of problems to minimize application management costs and resolve problems before they impact customers or the bottom line.

IT service management solutions

The HP IT Service Management (ITSM) solution helps your IT organization respond to today's challenges. It provides comprehensive and timely information about the complete IT landscape, better communication between people, processes and technologies, and more powerful management capabilities. These capabilities help you reduce manual workloads, keep all activities under control, speed up IT processes and improve quality.
