SkyPilot Networks Training Jakarta 2008

Redefining Broadband Wireless

SkyPilot Networks Corporation

SkyPilot was founded in March 2000, and began shipments in late 2004

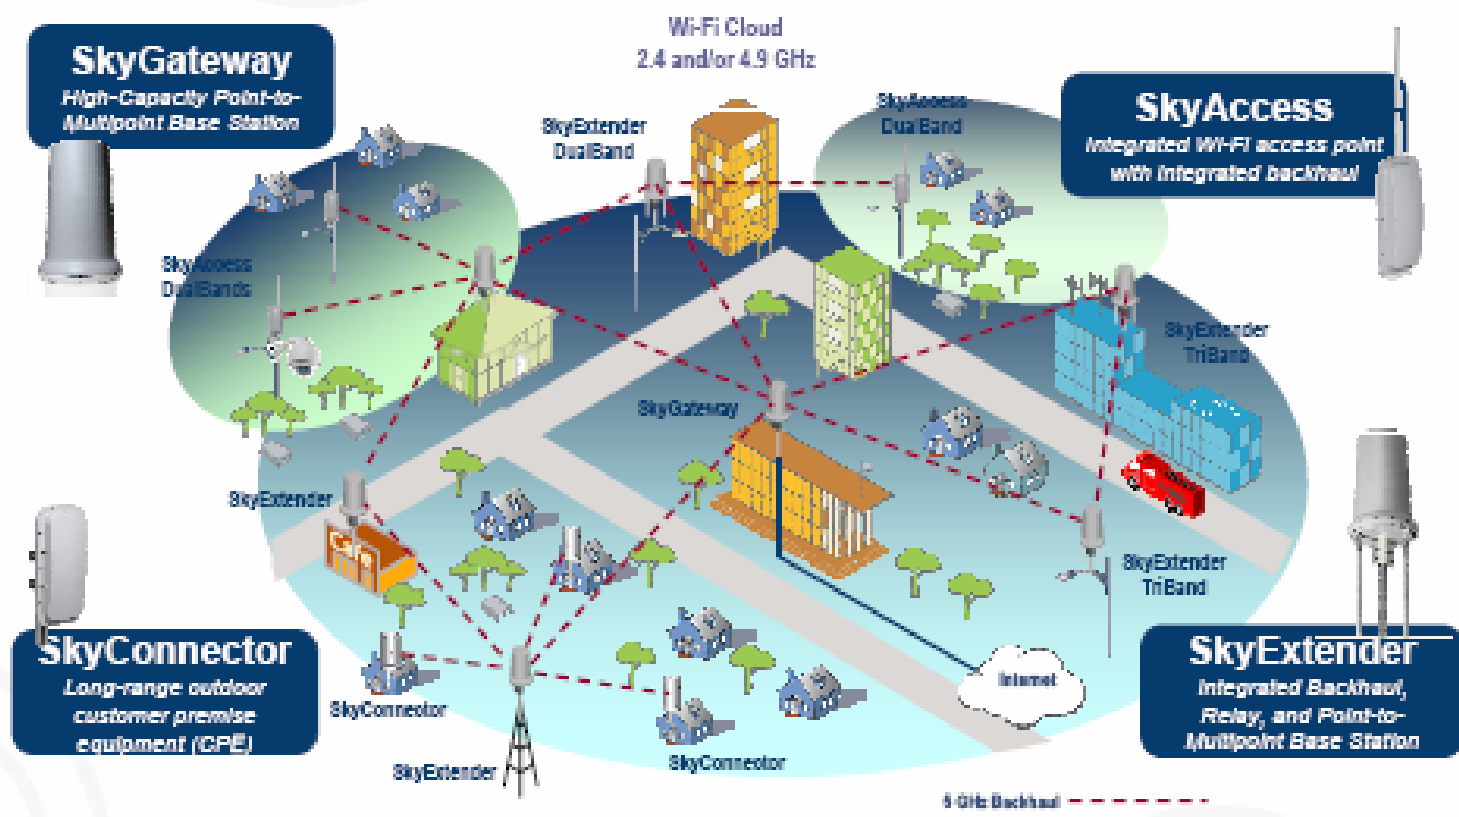

SkyPilot Networks is a leader in point to multipoint and wireless mesh solutions for broadband wireless access markets.

SkyPilot utilizes carrier-class technology based on patented SyncMesh™ architecture.

SkyPilot enables service providers, system integrators and local/regional governments to rapidly and cost effectively deploy a range of services over a common network infrastructure, including public Wi-Fi, voice over IP, video surveillance, mobile communications, public safety, and more.

SkyPilot is a privately held company with established international indirect sales channels to facilitate the global deployment of wireless PMP last mile networks.
